Listing of Claims:

Sub 2  
C4  
1. (Cancelled)

2. (Currently amended) A machine as claimed in claim 19 4, wherein the machine has a cash recognition means operable to determine the authenticity of cash received by the receiving means, and further operable to cause the machine to switch to the float mode in response to the testing of an article of a predetermined type received by the cash receiving means.

3. (Original) A machine as claimed in claim 2, wherein the cash recognition means is operable to determine denomination of cash items received by the receiving means during the float mode, and to direct the received items to one of a plurality of storage regions of the cash store, each region being associated with a respective denomination, in dependence upon the results of the determination.

4. (Currently amended) A machine as claimed in claim 19 ~~wherein the user-operable means is~~ wherein the means for switching between the normal mode and the float mode comprises a keypad which is also operable by ~~the~~ a user to select a product to be vended by the machine.

5. (Original) A machine as claimed in claim 4, including cash recognition means for determining the authenticity and denomination of cash items received by the receiving means, and operable to direct cash items received by the receiving means during the float mode to one of

a plurality of storage regions of the cash store, each region being associated with a respective denomination, in dependence upon the results of the determination.

6. (Currently amended) A machine as claimed in claim 19, the machine storing float levels for respective cash denominations, each float level representing the amount of cash items of the respective denominations to be stored following a float operation, and being further operable during the float mode to provide a display visible externally of the machine indicating the denominations of cash items for which the current stored level is less than the respective float level.

7. (Currently amended) A machine as claimed in claim 19, the machine comprising a further cash store, and being operable in response to a received instruction to discharge cash items from the first-mentioned cash store to the further cash store.

8. (Cancelled)

9. (Cancelled)

10. (Cancelled)

11. (Currently amended) ~~A machine as claimed in claim 8, including~~ A cash handling machine comprising:

a first cash store operable to dispense cash to a user and replenishable by cash received from a user,

a further store, and

a housing that prevents access to the further store, the housing including an unlockable access means which, upon unlocking, permits access to the further store but not to the first store, and provides removal of the further store from the machine,

the machine being responsive to an instruction for discharging cash from the first store to the further store until one or more predetermined conditions are met,

the machine including means for issuing said instruction in response to unlocking of said access means.

12. (Currently amended) ~~A machine as claimed in claim 8, having~~ A cash handling machine comprising:

a first cash store operable to dispense cash to a user and replenishable by cash received from a user,

a further store, and

a housing that prevents access to the further store, the housing including an unlockable access means which, upon unlocking, permits access to the further store but not to the first store, and provides removal of the further store from the machine,

the machine being responsive to an instruction for discharging cash from the first store to the further store until one or more predetermined conditions are met,

the machine including means for receiving an instruction issued remotely from the machine for performing said discharging operation.

13. (Currently amended) A cash handling machine as claimed claim 11 8, wherein said first store has a plurality of regions each for storing a respective denomination, and wherein said further store has a region within which multiple denominations are stored.

14. (Previously presented) A machine as claimed in claim 7, wherein the machine has a housing preventing access to the further store, but having an unlockable access means which, upon unlocking, permits removal of the further store from the machine.

15. (Previously presented) A machine as claimed in claim 14, wherein the access means provides, upon unlocking, access to the further store but not to the first store.

16. (Previously presented) A machine as claimed in claim 15, including means for issuing said instruction in response to unlocking of said access means.

17. (Previously presented) A machine as claimed in claim 7, having means for receiving an instruction issued remotely from the machine for performing said discharging operation.

18. (Previously presented) A cash handling machine as claimed in claim 7, wherein said first store has a plurality of regions each for storing a respective denomination, and wherein said further store has a region within which multiple denominations are stored.

19. (New) A cash handling machine comprising:  
a housing containing internal components of the machine,  
cash receiving means to receive cash deposited by a user,  
a cash store which is located inside the housing and from which cash can be dispensed to the user, and

means located within the housing for accumulating a credit value based on cash received by the cash receiving means,

wherein the machine is operable in a normal mode, in which a credit value is accumulated in response to cash received by the cash receiving means, and a float mode in which cash received by the receiving means is directed to the cash store without giving credit to the user,

the machine further including means for switching between the normal mode and the float mode in response to an operation by a person, wherein the operation can be performed without the person having to access the internal components of the machine.
